RECOMMENDATION LETTER

To Whom It May Concern,

I am pleased to provide this recommendation for Mr. Mo Maaz, who has worked in close coordination with the Mining Department at Saudi Gold Refinery (SGR) in the capacity of MIS Officer – Mining Operations Support.

Although his primary designation is within operational reporting, Maaz has consistently extended his contribution beyond routine responsibilities and actively supported the Mining Engineering and Feasibility teams in technical and analytical assignments.

During his involvement with the Mining Department, he has contributed to the following areas:

- Supporting mine planning and scheduling activities through structured production data preparation and analysis
- Assisting in preparation of pit-wise production summaries, stripping ratio evaluations, and grade performance assessments
- Contributing to feasibility study documentation through organized technical reporting, structured Word documentation, and analytical input formatting
- Supporting reconciliation of planned versus actual mining performance
- Assisting in evaluation of ore and waste projections across the open pit
- Preparing technical graphs and structured reports for management and engineering review meetings
- Preparing daily production reports and coordinating between Geology (Exploration & Production), Mining, and Plant departments

Through this exposure, Maaz has developed a solid practical understanding of mining operations, production scheduling logic, stripping ratio optimization, grade control fundamentals, and the structure and reporting requirements of feasibility studies.

He demonstrates strong analytical thinking, attention to detail, and a genuine interest in technical mining concepts, including mining studies, strategic planning, and conceptual development. His ability to translate operational data into structured engineering-support documentation has added value to our planning and reporting processes.

Despite coming from a Commerce background, Maaz has successfully built relevant technical exposure within a mining engineering environment and has shown the initiative and discipline expected from professionals pursuing long-term growth in the mining sector.

Based on his involvement, professionalism, and commitment to continuous development, I confidently recommend him for professional opportunities and further advancement within the mining industry.

I extend my best wishes to him in all his future endeavors and am confident he will continue to perform with dedication and excellence.

Sincerely,

Firdavs Ismatulloev
Team Lead – Feasibility Study
Chief Mining Engineer
Saudi Gold Refinery Company
